

COLOR FIGURES

The following color figures fall between pages 138 and 139.

- 1-1 The bronchopulmonary segments
- 1-2 The secondary lobules
- 3-1 Curschmann spiral
- 3-2 Charcot-Leyden crystals
- 3-3 Atypical mycobacteria
- 3-4 Fine needle aspiration of squamous cell carcinoma
- 5-1 Cardiogenic pulmonary edema
- 5-2 Bronchial-to-pulmonary artery collateral vessels
- 8-1 Congenital lobar emphysema
- 8-2 Extralobar sequestration (Rokitansky lobe)
- 9-1 Congenital pulmonary lymphangiectasis
- 9-2 Pulmonary septal and stromal calcinosis
- 9-3 Pulmonary hemosiderosis, early stage
- 9-4 Pulmonary hemosiderosis, late stage
- 10-1 Congenital left diaphragmatic hernia
- 11-1 Hyaline membrane disease of the newborn
- 11-2 Pink and yellow hyaline membranes
- 11-3 Cystic fibrosis of the pancreas
- 12-1 PAS-positivity of neurons in Fabry disease
- 12-2 Strong birefringency of neurons in Fabry disease
- 12-3 PAS-positivity of cells in Pompe disease
- 13-1 Cardiogenic pulmonary edema
- 13-2 Permeability pulmonary edema in uremia
- 13-3 Secondary hemosiderosis
- 14-1 Diffuse alveolar damage, exudative phase
- 16-1 Bleomycin toxicity
- 16-2 Drug-induced eosinophilic pneumonia

The following color figures fall between pages 298 and 299.

- 17-1 Lungs of a patient who died in status asthmaticus
- 17-2 Bronchial wall of a patient with status asthmaticus
- 17-3 Bronchiole in a patient with status asthmaticus

- 17-4 Airway in a patient with status asthmaticus
- 17-5 Bronchial mucus plug in an asthmatic patient
- 17-6 Bronchial glands in an asthmatic patient
- 18-1 A saddle embolus at the main pulmonary artery
- 18-2 Aneurysm of the main right pulmonary artery
- 18-3 Infected pleural infarct with cavitation caused by *Staphylococcus aureus*
- 19-1 Pulmonary hematoma
- 19-2 Talcosis in an intravenous drug abuser
- 19-3 Paraquat lung
- 19-4 Acute pulmonary thromboembolism and phlebotrombosis
- 26-1 Interstitial emphysema
- 29-1 Lungs of a patient who died in status asthmaticus
- 29-2 Bronchiole in a cotton worker with a history of byssinosis
- 30-1 Obliterative bronchiolitis and peribronchiolitis
- 30-2 Follicular bronchitis and bronchiolitis
- 31-1 Acute interstitial pneumonia (Hamann-Rich lung)
- 31-2 Acute interstitial pneumonia (Hamann-Rich lung)
- 31-3 Acute interstitial pneumonia (Hamann-Rich lung)
- 32-1 Desquamative interstitial pneumonia
- 32-2 Desquamative interstitial pneumonia
- 32-3 Langerhans cells in eosinophilic granuloma
- 32-4 Pulmonary alveolar microlithiasis
- 32-5 Corpora amylacea of the lung
- 32-6 Pulmonary blue bodies
- 32-7 Calcified Schaumann body in sarcoidosis
- 32-8 Fibrosis with dystrophic calcification of alveolar tissue
- 32-9 Apple-green birefringency in nodular amyloidosis of the lung
- 33-1 Endogenous lipid pneumonia
- 33-2 Cholesterol granulomas and fibrosis in adenosine deaminase deficiency, severe combined immunodeficiency, and gastroesophageal reflux
- 35-1 Silicosis in a granite worker

- 35-2 Progressive massive fibrosis in silicosis
- 35-3 Acute silicosis presenting as pulmonary alveolar proteinosis in a sandblaster
- 35-4 Extensive silicatosis in a drug addict

The following color figures fall between pages 458 and 459.

- 36-1 Pseudoasbestos body with a black core fiber in a gray-iron foundry worker
- 36-2 Dense collection of asbestos bodies in a patient with asbestosis
- 37-1 Multinucleated giant cell from a patient with hard metal lung disease
- 37-2 Pulmonary macrophages in an aluminum arc welder
- 37-3 Arc welder's lung
- 37-4 Nucleopore filter preparation in gray-iron foundry worker's lung
- 37-5 Pulmonary macrophages in thesaurosis
- 38-1 Pneumococcal pneumonia
- 38-2 Pneumococcal pneumonia
- 38-3 Streptococcal pneumonia
- 38-4 Streptococcal pneumonia
- 38-5 Staphylococcal pneumonia
- 38-6 Staphylococcal pneumonia
- 38-7 Staphylococcal pneumonia of the newborn
- 38-8 *Haemophilus influenzae* pneumonia
- 38-9 *Pseudomonas aeruginosa* pneumonia
- 38-10 *Pseudomonas aeruginosa* pneumonia
- 38-11 Heavy colonization of an arterial wall by *Pseudomonas aeruginosa*
- 38-12 *Pseudomonas aeruginosa* pneumonia
- 38-13 *Klebsiella* pneumonia
- 38-14 *Klebsiella* pneumonia
- 38-15 *Escherichia coli* pneumonia
- 39-1 Pulmonary abscess caused by *Bacteroides melaninogenicus*
- 39-2 *Legionella pneumophila* pneumonia
- 40-1 Pulmonary actinomycosis
- 40-2 Pulmonary actinomycosis
- 40-3 Pulmonary actinomycosis
- 40-4 Actinomycotic granule
- 40-5 Pulmonary nocardiosis
- 40-6 Pulmonary nocardiosis
- 40-7 Granule of *Streptomyces*
- 40-8 Pulmonary botryomycosis
- 40-9 Splendore-Hoeppli phenomenon in botryomycosis
- 42-1 Varicella pneumonia
- 42-2 Adenovirus pneumonia
- 42-3 Influenzae pneumonia
- 42-4 Multinucleated giant cell in measles virus pneumonia
- 42-5 Intracytoplasmic inclusions of *Chlamydia trachomatis*

The following color figures fall between pages 618 and 619.

- 43-1 Histoplasmosis
- 43-2 Coccidioidomycosis
- 43-3 Coccidioidomycosis
- 43-4 Asteroid body in sporotrichosis
- 43-5 Aspergillosis
- 43-6 Conidial heads of *Aspergillus niger*
- 43-7 *Rhizopus* infection
- 43-8 Cryptococcosis of the lung
- 43-9 Pulmonary adiaspiromycosis
- 43-10 Pulmonary phaeohyphomycosis
- 44-1 *Entamoeba histolytica* infection
- 44-2 Hydatid cyst of *Echinococcus granulosus*
- 44-3 Lung abscess caused by *Enterobius vermicularis*
- 44-4 *Enterobius vermicularis*
- 45-1 Granulomatous *Pneumocystis carinii* pneumonia simulating tuberculosis
- 45-2 Cryptosporidiosis of respiratory mucosa
- 45-3 Microsporidiosis of respiratory mucosa
- 45-4 *Candida albicans* pneumonia
- 45-5 Herpesvirus pneumonia
- 45-6 Pneumonia produced by *Mycoplasma fermentans* organisms, *incognitus* strain
- 47-1 Poorly differentiated adenocarcinoma with intracellular mucin
- 47-2 Colloid carcinoma
- 47-3 Bronchioloalveolar carcinoma
- 47-4 Bronchioloalveolar carcinoma of Clara cell origin
- 48-1 Squamous cell carcinoma *in situ*
- 48-2 Squamous cell carcinoma with spindle cell features stained for keratin
- 52-1 Myoepithelial cells of pleomorphic adenoma
- 52-2 Low-grade mucoepidermoid carcinoma
- 52-3 Acinic cell carcinoma of bronchial gland origin
- 53-1 Mucous gland cystadenoma of bronchus
- 53-2 Papillary adenocarcinoma of bronchus
- 54-1 Metastatic mature teratoma
- 55-1 Immunophenotype in large cell immunoblastic lymphoma of the lung and lymphomatoid granulomatosis
- 55-2 Immunophenotyping of B-cell lymphoma

The following color figures fall between pages 778 and 779.

- 56-1 Endobronchial lipoma
- 56-2 Solitary intrapulmonary fibrous tumor
- 56-3 Leiomyosarcoma
- 56-4 Pulmonary artery sarcoma
- 56-5 Kaposi sarcoma of the lung in a patient with acquired immunodeficiency syndrome
- 56-6 Fibrochondrolipoma

- 57-1 Asbestos
- 57-2 Mesothelioma of the pleura invading the chest wall
- 57-3 Mesothelioma
- 57-4 Tubulopapillary mesothelioma
- 57-5 Sarcomatoid mesothelioma
- 57-6 Biphasic mesothelioma
- 58-1 Choriocarcinoma
- 62-1 Immunofluorescence in Goodpasture syndrome
- 62-2 Immunofluorescence demonstration of C-ANCA and P-ANCA
- 64-1 Chronic eosinophilic pneumonia
- 65-1 Immunohistochemistry in hypersensitivity pneumonitis
- 66-1 Hamazaki-Wesenberg bodies in sarcoidosis
- 68-1 Neutrophilic capillaritis in Wegener granulomatosis
- 68-2 Gross appearance of Wegener granulomatosis involving the lung
- 68-3 Eosinophilic variant of Wegener granulomatosis
- 68-4 Focal glomerulitis in a patient with bronchocentric Wegener granulomatosis
- 73-1 Tracheal obstruction after tracheostomy
- 73-2 Squamous cell carcinoma of the trachea
- 73-3 Adenoid cystic carcinoma of the trachea
- 73-4 Ossifying carcinoma of the trachea
- 74-1 Thymoma
- 74-2 Benign cystic teratoma of the mediastinum
- 74-3 Ganglioneuroma of the mediastinum
- 74-4 Invasive thymoma
- 74-5 Teratocarcinoma of the mediastinum
- 75-1 Fibrous plaque of the diaphragm
- 75-2 Fibrous plaque of the diaphragm
- 76-1 Peripheral neuroectodermal tumor (MPNT, Askin tumor) of the chest wall
- 76-2 Nodular fasciitis of the thoracic wall
- 77-1 Statue in the gardens of Hatfield House
